- E. SESSION SUMMARY:

General target area is a land/water interface which has a man-made portion (believed to be paving). The area is wide and open, but cluttered with oddly spaced large "things". These "things" move slowly on the ground, and appear to "que-up" or line up one behind the other while moving along.

There were immediate first impressions of a marina, and following strong impressions of an airport.

MEMORANDUM FOR: CH, ODT-S

SUBJECT: LDPS Project 92-3-L

1. All five sources agree on the presence of an evident land and water interface that is associated with the target. Indeed the emphasis was placed on the concept of "water" There were two principal concepts associated with the target. The first appeared to deal with a structure whose shape appeared to be cylindrical or oval. There appeared to be a historical and a religious significance attached to the target structure. In a second instance, the target was described as a airport. And one viewer described the structure as a dam.
